**THE** alteration which has recently taken place in the Government rate of paying the Dollar to the Army, as well as for all public supplies, suggested to the Compiler the utility of Computation Tables, which would enable the public to reduce British Sterling (the Dollars at 4s. 4d.) to Halifax Currency, and vice versa.

The correctness of the calculations, which is the great recommendation of Computation Tables, the Compiler can vouch for, as each has been proved in a variety of ways.

These Tables will be found particularly useful to Public Departments having the expenditure of Public money, to Pay-Masters, Pay-Serjeants, and all those persons in the Canadas, Nova-Scotia, and New-Brunswick, who may have money transactions with the Commissariat Department.

Although their merit consists in the indefatigable labour that has been exercised in their Compilation, the author trusts that this will suffice to procure for his production, the countenance of His Excellency the Earl of Dalhousie, the Officers of the Army and Navy, and the Public in general.

The work has been laid before Deputy Commissary General Forbes, the head of the Commissariat for this District, who entirely concurs in their utility, and strongly recommends their publication.

Isle-aux-Noix, January, 1827.
